The diagram illustrates a three-phase system with three transformers and a motor. The system is connected to a three-phase supply (L, N) at the bottom. The first transformer on the left has terminals P, S, N on top and L, L', N on the bottom. A switch is connected between P and S. The motor is represented by a circle with a cross, with terminals L and N. The second transformer in the middle has terminals P, S, N on top and L, L', N on the bottom. The third transformer on the right has terminals P, S, N on top and L, L', N on the bottom. The connections show a complex arrangement of phase-to-phase and phase-to-neutral connections across the transformers and the motor.
